

FAQs - Neurologist Clinic

1. What conditions do neurologists treat?

Neurologists diagnose and treat disorders of the brain, spinal cord, and nerves. This includes epilepsy, migraines, stroke, multiple sclerosis, Parkinsons disease, and neuropathy.

2. Do I need a referral to see a neurologist?

Some insurance plans require a referral from your primary care physician. It's best to check with your provider.

3. What should I bring to my first appointment?

Bring your ID, insurance card, a list of medications, past medical records, and any imaging reports like MRIs or CT scans.

4. How long does a neurology appointment take?

A new patient appointment usually takes 45-60 minutes. Follow-ups are generally 20-30 minutes.

5. Will I undergo tests during my visit?

The neurologist may recommend tests such as an MRI, EEG, or EMG depending on your symptoms.

6. Are treatments covered by insurance?

Most diagnostic tests and treatments are covered, but it depends on your plan. Contact your insurance provider to confirm.

7. Do neurologists treat memory problems?

Yes, neurologists evaluate and manage memory disorders such as Alzheimers disease and other forms of dementia.

8. What if I need urgent attention?

For emergencies like sudden weakness, loss of vision, or severe headaches, visit the ER immediately.
